

## SAGEMATH CLOUD: A GUIDE TOUR

SHUN'ICHI YOKOYAMA

SageMath Cloud (SMC) is a free and viable cloud service based on Sage, an integrated mathematical software. SMC was launched in 2013 and now can be used without any installation and preparations. In this talk, we will introduce several functions of SMC. If time permits, we want to talk about an upcoming project to create huge databases on number theory, that is called LMFDB. (No preliminary knowledge is needed thus all are welcome.)
